

WAREHOUSE ORDERS

Always use two people when pulling and make sure to **lift** sheets off of each other. Foam may need to be cut on sides if not already done.

Pulling sheets on your own causes them to slide against each other which can dent the High Gloss.

When loading a sheet of High Gloss for customer pick up, always make sure the foam stays on the sheets. Foam may need to be cut on sides if not already done.

Never load a High Gloss sheet without the covering as this can allow debris to get inbetween the sheets that may cause dents.

To insure there is no damage to the High Gloss sheets in transit, always make sure the sheets have foam in between each finished side as well as a top and bottom board to protect the finish.
